

To the Hiring Team at JusB Solutions,

My name is Kieren Gregory, and I'm excited to apply for the Cybersecurity & OSINT track of your Black Rooster Labs Internship and Training Program. As a current M.S. student in Cybersecurity from the University of West Florida with a background in both red and blue team operations, OSINT and software team collaboration. I'm seeking an opportunity to contribute my hands-on skills in a mission-driven environment like yours.

Through academic and independent work, I've built strong technical experience in OSINT investigations and threat analysis. My academic projects include enumerating exposed assets using BBOT and Google Dorking, simulating adversary techniques through MITRE ATT&CK, and mapping real-world CVEs and CWEs to attack chains. I've used Kali Linux, Metasploit, and Nmap for red team assessments, and worked with Security Onion and Suricata to detect and analyze live packet traffic.

I've also developed secure applications with JWT authentication, RBAC controls, and OWASP Top 10 awareness, enabling me to approach security from both offensive and defensive lenses. I'm passionate about producing clear documentation and reports, and always prioritize ethical standards in every lab, capture-the-flag challenge, or client-facing scenario I tackle.

I admire Black Rooster Labs' commitment to real-world experience, and I'm eager to learn from your team while contributing my technical curiosity and problem-solving mindset. I'd welcome the opportunity to bring value to your clients especially in areas involving threat intelligence, OSINT, and security tooling.

Thank you for your time and consideration. I've attached my resume and would be glad I look forward to the chance to discuss how I can contribute to the team of likeminded fixers.

Sincerely,

*Kieren Gregory*
